William Braud, Rosemarie Anderson : Transpersonal Research Methods for the Social Sciences: Honoring Human Experience (Progress in Neural Processing; 7) before purchasing it in order to gage whether or not it would be worth my time, and all praised Transpersonal Research Methods for the Social Sciences: Honoring Human Experience (Progress in Neural Processing; 7):

0 of 1 people found the following review helpful. Content is very good, but half the book was water damaged upon ...By H.W.RandallContent is very good, but half the book was water damaged upon receipt in a dry package. It's hard to flip through the pages, and I think that acknowledgement should have appeared on the sales list. It was from Hippo!'21 of 22 people found the following review helpful. Best One Out ThereBy Daryl PaulsonAnderson and Braud are no armchair researchers or theorists in the transpersonal field. They bring a much needed dimension to the field in terms of research. The vast majority of transpersonal leaders are either theorists who ground their theories on top of other theories or those with very weak research designs. Anderson and Braud take no sides but present ways for every human science researcher to improve their methods of inquiry. Not only is the book the best in the field, it provides many outside resources to phenomenological, heuristic, action, case study, ethnographic, meta-study, statistical, and integral inquiry. A super book.11 of 11 people found the following review helpful. A fundamental book for transpersonal researchBy Julio F. D. RezendeDuring many times I red this amazing book. I think that this book is a landmark in development of methods to examine and experience the consciousness states. One of the most interesting aspects is to try apply this kind of knowledges to social dimension. Activity very well done. I recommend this book for psychologist, students and counsciousness researchers.

There is no shortage of research methods that are easily applied to the study of everyday human experience. How, though, does one attempt to study extraordinary human experiences - ultimate values and meanings, peak experiences, transcendence and heightened awareness, among others. William Braud and Rosemarie Anderson introduce a series of transpersonal research methods that are intended to help researchers develop new ways of knowing and methods of inquiry. While these methods will be of particular interest to researchers in transpersonal psychology, humanistic psychology, or transpersonal studies applied to traditional fields, the authors argue that these approaches - with their emphasis on developing intuition, empathy and self-awareness can benefit anyone involved in the research enterprise across many disciplines.
